## *Introduction*

---

This Annual Data Report is a compilation of data tables summarizing Southern California Renal Disease Council's (SCRDC) activities during 2004 in two areas: Treatment Resources & Profiles and Transplantation. It provides numerous data profiles of the Network 18 patient population and ESRD treatment resources. The CMS Annual Report for 2004, which is available on our website, <http://www.esrdnetwork18.org>, has the Quality Improvement and Patient Services sections which were not included in this version to avoid duplication. We gladly welcome any suggestions for future reports, as well as requests for customized reports/profiles.

We appreciate our members' participation in Network activities and continuing efforts to improve patient care outcomes.

This report will soon be made available for viewing and printing on our website.

---

*page intentionally left blank*

**A. Description of the Patient Population**

A total of 25,638 patients were receiving treatment in Southern California Renal Disease Council (SCRDC) facilities as of December 31, 2004. This represents a 4.8% increase over the total number receiving care at the end of 2003. Exhibit II-1 shows that the SCRDC and United States patient populations continue to grow although the rate of increase is generally declining.

**Exhibit II-1  
ESRD Prevalence in Network 18 And The United States: 2000-2004**

Year	Network 18		United States	
	Dialysis Patients	Increase	Dialysis Patients	Increase
12/00	20,364	+6.5%	274,925	+5.3%
12/01	21,795	+7.0%	288,090	+4.8%
12/02	23,361	+7.2%	299,824	+4.7%
12/03	24,458	+4.7%	312,300	+4.2%
12/04	25,638	+4.8%	322,824	+3.4%

**Prevalence Rate**

Prevalence is the degree to which a population is affected with a particular disease at a given time. In this report, prevalence is defined as the number of patients with ESRD present in the population as of December 31, 2004. An analysis of prevalence data by specific demographic variables, such as area of patient residence or age, provides information on the characteristics of those patients receiving care. Exhibit II-2 shows that the overall ESRD prevalence rate in Network 18 has increased over the past five years from 951 per million in 2000 to 1138 per million in 2004.

**Exhibit II-2  
Network 18 ESRD Prevalence Rate: 2000-2004**

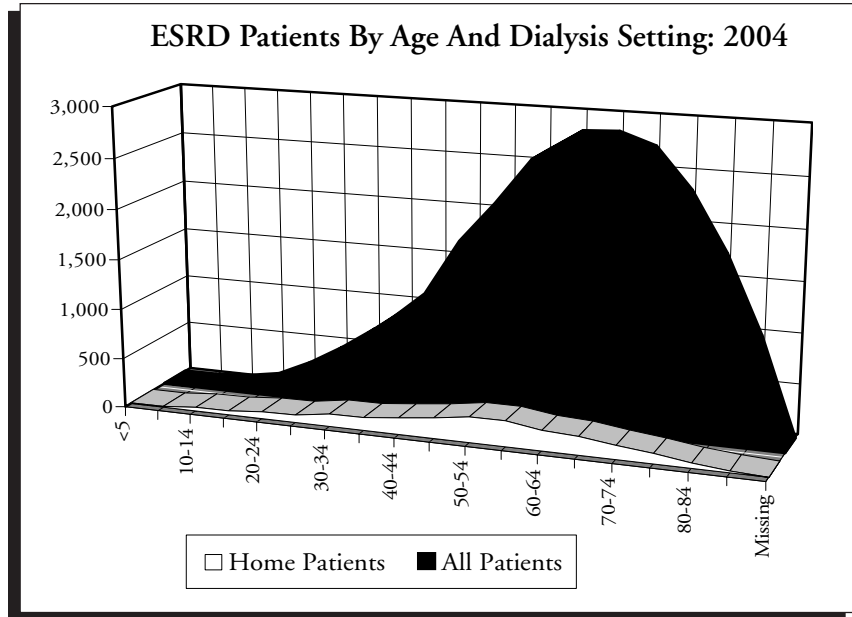

# Treatment Resources & Profiles

## Patient Demographics

The following series of Exhibits describe various Network 18 patient population characteristics, including breakdowns by age, sex, race and primary ESRD diagnosis.

### Distribution By Age

43.2% of all patients on dialysis in Network 18 as of December 31, 2004 were 65 years of age or older. This is less than 43.2% in 2000 and consistent with the advancing age of the United States and ESRD populations as a whole. 55.9% of patients were between the ages of 20 and 64, and 1.0% were under 20 years of age. The percentage of patients in these age groups has dropped in recent years. Home dialysis patients were younger than those dialyzing in-center with 41.7% of home patients less than 50 years of age, compared to 23.0% of in-center patients. Exhibit II-3 portrays the age distribution of the home, in-center and total dialysis patient populations at the end of 2004.

**Exhibit II-3**  
**ESRD Patients By Age And Dialysis Setting: 2004**

Age Groups	Home		In-Center		All	
	Patients	Percent	Patients	Percent	Patients	Percent
<5	8	0.4%	8	0.0%	16	0.1%

<b>Total</b>	<b>20,364</b>	<b>100%</b>	<b>21,795</b>	<b>100%</b>	<b>23,361</b>	<b>100%</b>	<b>24,458</b>	<b>100%</b>	<b>25,638</b>	<b>100%</b>

**Distribution By Race**

The trend in the racial distribution of dialysis patients has been relatively steady throughout the past five years. Exhibit II-5 shows that the absolute number of patients in all race groups increased in 2004. Patients of Hispanic ethnicity constitute the largest group; non-Hispanic Whites percentage of the total population continued its steady decline.

**Exhibit II-5  
ESRD Prevalence By Race: 2000-2004**

Race	2000		2001		2002		2003		2004

# Treatment Resources & Profiles

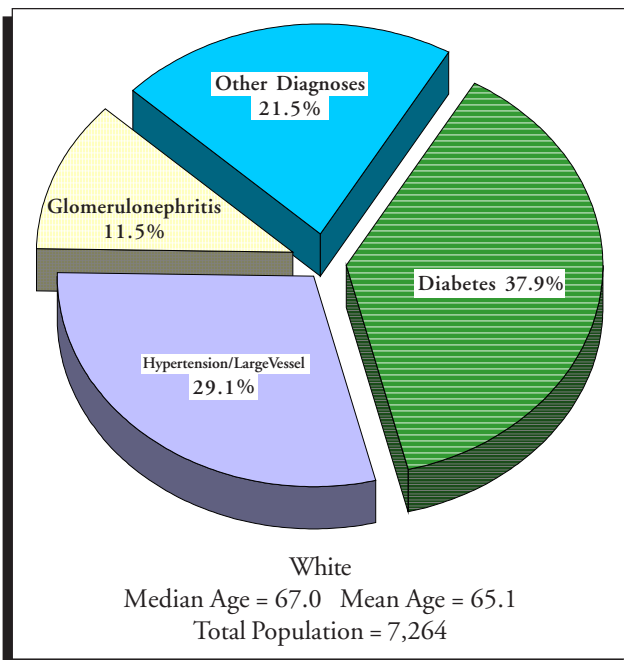

## Distribution By Primary ESRD Diagnosis

As shown in Exhibit II-6, diabetes, hypertension and glomerulonephritis are the primary cause of renal failure for more than 85.1% of all Network 18 dialysis patients at the end of 2004. This is consistent with previous years' experience. Diabetic nephropathy is the leading cause of ESRD for Whites, Hispanics and Asians; the leading cause of renal failure among Blacks continues to be hypertension. Profiles of primary ESRD diagnosis by race are shown in Exhibits II-7 through II-10.

**Exhibit II-6**  
**ESRD Prevalence By Primary Diagnosis: 2000 - 2004**

Primary ESRD Diagnosis	2000 % Pts.	Median Age	2001 % Pts.	Median Age	2002 % Pts.	Median Age	2003 % Pts.	Median Age	2004 % Pts.	Median Age

**Exhibit II-10**  
**ESRD Prevalence by Primary Diagnosis:**  
**Asians, 2004**

**Distribution By Dialysis Modality And Setting**

In both Network 18 and the United States, in-center hemodialysis continues to be the most popular ESRD treatment option, accounting for 92.1% and 91.6% of patients respectively. At 7.9%, SCRDC's home dialysis rate is below the nationwide rate of 8.4%.

The majority of home patients, both in Network 18 and the United States, are on peritoneal dialysis. CAPD/CCPD patients account for 99% of home patients in both Network 18 and the United States. Exhibit II-11 shows that the number of CAPD/CCPD patients in Network 18 has steadily dropped over the years. In addition, the percentage of the total dialysis population receiving peritoneal dialysis has decreased in both Network 18 and the United States over the years.

**Exhibit II-11**  
**Peritoneal Dialysis Prevalence In Network 18 And United States: 2000-2004**

Year	Network 18			United States		
	CAPD/CCPD Patients	Total Patients	% PD	CAPD/CCPD Patients	Total Patients	% PD
2000	1,855	20,364	9.1%	26,984	274,925	9.8%
2001	1,960	21,795	9.0%	26,638	288,090	9.2%
2002	2,111	23,361	9.0%	27,163	299,824	9.1%
2003	2,133	24,458	8.6%	27,496	312,300	8.8%
2004	2,040	25,638	8.0%	26,970	322,824	8.4%

## Treatment Resources & Profiles

Home hemodialysis continues to decline in popularity in ESRD Network 18 where the number of patients has risen from 18 in 2000 to 37 as of December 31, 2004. This decline mirrors nationwide experience which shows that the number of patients has dropped from 1,508 in 2000 to 1,505 in 2004. SCRDC continues to have the lowest home hemodialysis rate among all the Networks, reflecting its compact geography and relatively urban populous. Exhibit II-12 provides a detailed breakdown and graphic presentation of SCRDC patients by treatment modality and setting for the past five years.

**Exhibit II-12**

### Distribution Of Dialysis Patients By Treatment Modality And Facility

The following reports, Exhibits II-13 and II-14, provide detailed information on the distribution of dialysis patients by treatment modality in a summary format and on a facility-specific basis respectively. The following data is shown:

- ◆ Number of hemodialysis stations, as of December 31, 2004
- ◆ Number of dialysis patients, by modality, as of December 31, 2004
- ◆ Number of new ESRD patients between January 1 and December 31, 2004

Insert Exhibit III-13 Network 18 Patients by Treatment Modality and Facility: 2004 Summary

- ◆ Number of dialysis patients, by modality, as of December 31, 2003
- ◆ Number of new ESRD patients between January 1 and December 31, 2003

### B. The New Dialysis Population

Information on new patients provides important data on patterns of referral for treatment, access to care, and assistance in planning for future costs of the ESRD program. As noted in Exhibit II-15, the number of patients initiating dialysis during 2004 increased by 0.8% in Network 18 and 1.0% nationwide.

Exhibit II-15  
New Dialysis Population  
Network 18 And The United States:2000–2004

Year	Network 18		United States	
	New Patients	Increase	New Patients	Increase
2000	6,831	+2.9%	92,679	+3.2%
2001	7,269	+6.4%	96,075	+3.7%
2002	7,729	+6.3%	98,006	+2.0%
2003	7,860	+1.7%	100,426	+2.5%
2004	7,908	+0.8%	102,430	+1.0%

**Incidence Rate**

Incidence is the rate of occurrence of renal disease in the total population. An analysis of incidence data by specific demographic variables, such as area of residence or age, provides information on the characteristics of those individuals more likely to develop chronic renal failure. Exhibit II-16 shows that the overall incidence of patients initiating dialysis treatment steady at 351 per million in 2004.

**Exhibit II-16**  
**Network 18 ESRD Incidence Rate: 2000 - 2004**

**Patient Demographics**

The following series of Exhibits describe various demographic characteristics of the Network 18 patients starting dialysis treatment in 2004.

**Distribution By Age**

In 2004, 62.2% (down from 62.5% in 2003) of all incident dialysis patients in the Network 18 area were age 60 and older, 36.3% were between the ages 20 and 59, and 1.5% were under 20 years old. The mean age of new dialysis patients in 2004 was 63.6 while the median age was 66.0. Exhibit II-17 provides a breakdown of the new patients by age bracket.

**Exhibit II-17  
Network 18 ESRD Incidence By Age: 2004**

Age Group	No. of Incident Patients	Percent
<5	13	0.2%
5 - 9	12	0.2%
10 - 14	38	0.5%
15 - 19	57	0.7%
20 - 24	87	1.1%

80 - 84	743	9.4%
>85	482	6.1%
Missing	0	0.0%
<b>Total</b>	<b>7,908</b>	<b>100.0%</b>

**Distribution By Sex**

Continuing the trend of recent years, a larger percentage of new patients were male than female. Exhibit II-18 shows that the percentage of new patients who were male has steadily increased in recent years.

**Exhibit II-18  
Network 18 ESRD Incidence By Sex: 2000-2004**

Sex	2000		2001		2002		2003		2004

**Distribution By Primary ESRD Diagnosis**

As shown in Exhibit II-20, diabetic nephropathy was the leading cause of renal failure among new patients in 2004, accounting for 48.1% of the new patient population. The other major causes of renal failure were hypertension/large vessel disease (30.0%) and glomerulonephritis (6.5%). Exhibits II-21 through II-24 profile primary diagnosis by race for new ESRD patients in 2004.

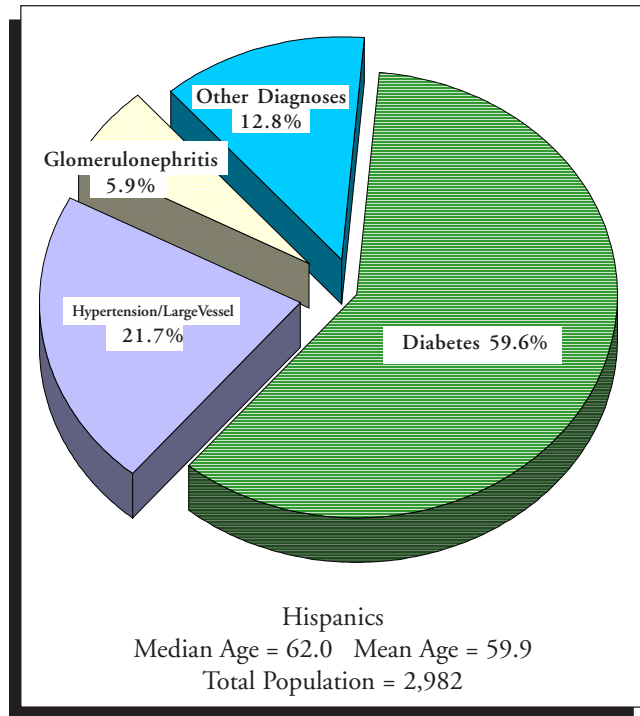

**Exhibit II-20

**Distribution of New Dialysis Patients By Facility**

The far right column of Exhibit II-14, Network 18 Patients by Treatment Modality And Facility: December 31, 2004, shows the number of new patients who started dialysis at each SCRDC facility during 2004.

**C. Description of Treatment Resources**

Southern California Renal Disease Council providers offer the full range of dialysis and transplant services to meet the needs of adult and pediatric ESRD patients. The following services were available as of December 31, 2004:

- ◆ 257 Medicare-certified outpatient dialysis providers. The 236 freestanding facilities and 21 hospital-based facilities have a total of 5,141 hemodialysis stations.
- ◆ 113 facilities offer continuous ambulatory peritoneal dialysis (CAPD) and/or continuous cycling peritoneal dialysis (CCPD) services.
- ◆ 4 non-Medicare-certified dialysis facilities at the West Los Angeles, Long Beach, Loma Linda and San Diego Veterans Administration Medical Centers. These facilities were treating 243 patients at the end of 2004.
- ◆ 18 Medicare-certified transplant centers.
- ◆ 2 organ procurement agencies.

Exhibit II-25 shows the total inventory of facilities and hemodialysis stations for the past five years; refer to Exhibit II-14 for facility-specific information.

**Exhibit II-25  
Network 18 Outpatient Facilities And Hemodialysis Stations: 2000—2004**

Year	Outpatient Facilities	Percent Change	Hemodialysis Stations	Percent Change
12/31/00	221	+2.8%	4,159	+2.9%
12/31/01	226	+2.3%	4,339	+4.3%
12/31/02	236	+4.4%	4,571	+5.3%
12/31/03	253	+7.2%	4,952	+8.3%
12/31/04	257	+1.6%	5,141	+3.8%

## Treatment Resources & Profiles

Seven additional facilities operating at the end of 2004 and the closure of three facility:

City	Facility	Date
..... OPENED .....		
Banning	Gambro - Banning	01/14/04
Garden Grove	Gambro – Harbor Boulevard	04/23/04
San Fernando	FMC – San Fernando	04/28/04
Los Angeles	California Kidney Care Center	05/10/04
Harbor City	FMC – South Bay	09/15/04
Escondido	DaVita – Escondido Home Training	10/01/04
Glendora	Mohan Dialysis Center of Glendora	10/25/04
..... CLOSED .....		
Long Beach	St. Mary Medical Center	05/01/04
Calexico	Renal Services Group of Calexico	07/01/04
La Jolla	Gambro -La Jolla	09/01/04

The new facilities account for nearly 90% of the net additional hemodialysis stations, the balance reflects expansion of existing facilities.

**A. Network and National Trends**

1,253 renal transplants were performed at the 18 SCRDC transplant centers during 2004. The number of transplants involving living-related donors (LRD) and living-unrelated donors (LURD) has increased in recent years; cadaveric donors now account for roughly 64.9% of Network 18 transplants. Also, 129 transplant (10.3% of the total) were performed on patients who had not yet started dialysis treatment. Exhibit III-1 shows that the kidney transplant caseload has generally increased in Network 18 and United States over the past five years. Overall caseload growth over the past five years is nearly 24% in Network 18 and 15% in the United States. Exhibit III-2 provides a breakdown of Network 18 transplant activity by transplant center.

**Exhibit III-1  
Network 18 And United States Transplants: 2000-2004**

Year	Network 18 Transplants	Change	United States Transplants	Change

# Transplantation

## Transplant Rate

The transplant rate is calculated by dividing the total number of transplants performed during the year by the number of dialysis patients at the end of the year. Exhibit III-3 shows that the Network 18 and United States transplant rates have declined in recent years.

**Exhibit III-3  
Network 18 And United States Transplant Rates: 2000-2004**

Year	Network 18 Transplants	Transplant Rate	United States Transplants	Transplant Rat
2000	1,067	5.6%	14,280	5.5%
2001	1,099	5.0%	14,628	5.1%
2002	1,123	4.8%	14,334	4.8%
2003	1,199	4.9%	15,342	4.9%
2004	1,253	4.9%	16,568	5.1%

## Patient Demographics

The following Exhibits profile various demographic characteristics of patients who received transplants in Network 18 transplant centers in 2004.

**Exhibit III-4  
Network 18 Transplant Recipients By Age: 2004**

### Transplant Recipients By Age

Exhibit III-4 shows that 997 (79.6%) of transplant recipients were between 20 and 64 years of age. Within that group, the largest number of patients in the 50-54 (168) and 55-59 (166) age brackets. 7.0% of transplant recipients were less than less than 20 years of age and 13.4% were 65+ years of age.

## B. Network 18 Dialysis Facilities Transplant Data

Exhibit III-7 profiles transplant recipients and patients returning to dialysis following transplant rejection by dialysis facility. It shows that 1109 Network 18 dialysis patients received transplants in 2004. The different transplant procedure workload figures reported by SCRDC transplant centers and dialysis centers reflects those patients who dialyzed outside the Network 18 area, received a transplant outside the Network 18 area, or had yet to start dialysis treatment. Exhibit III-7 also shows a steady increase — to 400 patients in 2004 — in the number of patients returning to dialysis after transplant rejection. “N/A” indicates that the facility was not open for any part of the year.
