Outpatient Maintenance Dialysis—End-Stage Renal Disease
The End-Stage Renal Disease (ESRD) Medicare payment for dialysis services is based on a fixed amount known as the composite rate. The composite rate provides a single payment amount that includes the cost of some drugs, laboratory tests, and other items and services furnished to Medicare beneficiaries who are receiving dialysis. In addition to payment for the composite rate, separate payment is made for certain laboratory tests and drugs.

COMPOSITE PAYMENT RATE SYSTEM

The composite payment rate system is a prospective comprehensive payment system that covers the bundle of services, laboratory tests, certain drugs, and supplies routinely required for dialysis treatments furnished to Medicare beneficiaries in approved ESRD facilities. All modes of in-facility and Method I home dialysis are included under the composite payment rate system. The following components are not included in the composite payment rate:

- Physician’s professional services;
- Separately billable laboratory services;
- Separately billable drugs; and
- Bad debt.

Under Method I, the facility with which the beneficiary is associated assumes responsibility for furnishing all home dialysis equipment, supplies, and support services. A certified outpatient dialysis facility that is not the beneficiary’s usual facility can furnish maintenance services and must bill Medicare directly for these services.

Medicare beneficiaries pay a 20 percent copayment for composite rate services after the Part B deductible has been met.

Composite Rate Covered Items and Services

In general, all items and services necessary for delivering outpatient maintenance dialysis are included in the composite rate including routinely provided drugs, laboratory tests, and supplies for dialysis-related services. Services must be furnished by the facility either directly or under arrangement.

Composite Rate Payment Methodology Including Adjustment Factors

The composite rate:

- Is applied on a per-treatment basis, with payments capped at an amount equal to three dialysis sessions per week;
- Is applicable to both facility and Method I home dialysis Medicare beneficiaries;
- Includes a budget neutral basic case-mix adjustment. Case mix adjusters include:
  - Age (<18, 18-44, 45-59, 60-69, 70-79, ≥80 years);
  - Body surface area; and
  - Body mass index;
SEPARATELY BILLABLE ITEMS AND SERVICES

In addition to the composite rate, dialysis facilities may receive additional payment for separately billable laboratory tests and drugs.

Separately Billable Laboratory Tests

Separately billable laboratory tests are paid according to the Clinical Laboratory Fee Schedule. If separately billable laboratory tests are furnished more often than specified, they are only covered if the medical necessity of the test(s) and the nature of the illness or injury (diagnosis, complaint, or symptom requiring the performance of the test(s)) are included on the claim.

Medicare beneficiaries do not pay a copayment for separately billable laboratory tests.

- Includes wage indices based on acute hospital and employment data;
- Includes a budget neutral wage index adjustment; and
- Includes a drug add-on adjustment, which accounts for the difference between payments for separately billable drugs and payments based on a revised drug pricing methodology and eliminates the difference between composite payment system costs and payments.

The base composite payment rate for 2009 is $133.81 for both hospital-based facilities and independent facilities.

Effective January 1, 2009, the wage index adjustment is based on 100 percent of the Core-Based Statistical Area geographic definitions for purposes of determining urban and rural locales and the wage index floor is set at .70.

Effective January 1, 2009, the drug add-on adjustment to the composite rate is 15.2 percent.
**Separately Billable Drugs**

Some drugs administered in the facility by facility staff are not covered under the composite rate but may be medically necessary for some beneficiaries who receive dialysis. These drugs must be billed separately and accompanied by medical justification either through information on the claim form or as requested by the Fiscal Intermediary or A/B Medicare Administrative Contractor. Staff time used to administer the drugs is covered under the composite rate. Supplies used to administer the drugs may be billed in addition to the composite rate.

Hospital-based facilities and independent ESRD facilities are paid the Average Sales Price of drugs plus six percent for separately billable drugs. Medicare beneficiaries pay a 20 percent copayment for separately billable drugs.

**Medicare Contracting Reform (MCR) Update**

In Section 911 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) Congress mandated that the Secretary of the Department of Health and Human Services replace the current contracting authority under Title XVIII of the Social Security Act with the new Medicare Administrative Contractor (MAC) authority. This mandate is referred to as Medicare Contracting Reform. Medicare Contracting Reform is intended to improve Medicare’s administrative services to beneficiaries and health care providers. All Medicare work performed by Fiscal Intermediaries and Carriers will be replaced by the new A/B MACs by 2011. Providers may access the most current MCR information to determine the impact of these changes and to view the list of current MACs for each jurisdiction at [http://www.cms.hhs.gov/MedicareContractingReform](http://www.cms.hhs.gov/MedicareContractingReform) on the CMS website.
